

# Operations with Two Fractions (A)

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_

Calculate each result.

1.  $\frac{16}{19} \times \frac{1}{2} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$   
Solve Simplify

2.  $\frac{5}{6} + \frac{1}{19} = \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

3.  $\frac{1}{5} + \frac{4}{7} = \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

4.  $\frac{1}{2} \times \frac{14}{17} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$

5.  $\frac{1}{7} \div \frac{6}{9} = \frac{\quad}{\quad} \times \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$

6.  $\frac{2}{4} + \frac{3}{19} = \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$

7.  $\frac{3}{10} \div \frac{4}{5} = \frac{\quad}{\quad} \times \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$

8.  $\frac{1}{5} \div \frac{9}{17} = \frac{\quad}{\quad} \times \frac{\quad}{\quad} = \frac{\quad}{\quad}$

9.  $\frac{1}{2} \times \frac{7}{18} = \frac{\quad}{\quad}$

10.  $\frac{4}{5} - \frac{1}{4} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$
